INTRODUCTION

It's difficult to believe that there have already been no less than five earlier editions of this registry; yes, and the first one came out all the way back in 1978! Each edition completely sold out and by the time we got to the Fifth Edition the book had become "the" standard reference guide to federal frequencies. In the years since it arrived on the scene, the Registry has been seen on the evening news of two national TV networks been spoken of on the floor of the U.S. Senate, and has become a favorite information source of hobbyists, the news media, and communications dealers, planners, users, and manufacturers. Copies of each edition have also been used by many federal agencies. This, the Sixth Edition of the Registry, is the largest and most informative yet compiled; we think that it's also the most interesting and useful.

We've come a long way, especially when you consider that when we sat down to compile the First Edition the goal was assemble the hard-to-locate data accumulated by a small band of scanner enthusiasts so that it might be put to use by other hobby monitors who wanted to expand their horizons. That's why, despite the Registry's widespread use and influence, scanner users and enthusiasts remain the inspiration for this Registry, and also the major source of new information to include in its various editions. It's our intention to maintain its usefulness to hobbyists and also professional interests. Keeping the balance between the two hasn't always been easy.

Those who compare any or all of the five previous editions of this Registry with this Sixth Edition will quickly see that we are presenting a considerable amount of new, revised, corrected, and expanded information. While this has been our policy with each previous edition, this time we have been able to include many agencies not covered in earlier editions. We have also been able to offer more in-depth information on many agencies. In addition, the general appearance and readability of the listings and the entire Registry has been improved to a great extent.

Per requests from Registry users, the dot matrix printer format was dropped and replaced by a more traditional typeface. A narrower typeface was used in this edition, and run wider across the page in order to permit more listings-per-page-- and, even then, it was still necessary to add pages to the Registry to fit everything in. The previous edition didn't contain any introductory comments by yours truly and many users seemed to be disappointed, so this section was reinstated.

As also suggested by Registry users, the section we ran

containing the by-frequency format listings was dropped in favor of freq. listings according to the name of the operating agency. This makes it easier to get an overview of a given agency's communications and has permitted the inclusion of more in-depth frequency data and even the inclusion of the aircraft rosters of some agencies, plus signal codes, 10-codes, buzzwords, code names, etc., wherever possible.

Monitors also asked us to scrap our long-standing policy of rounding off certain split frequencies to the nearest 5 kHz point. This Sixth Edition reflects this change, so that a frequency such as 165.0125 MHz no longer turns up as 165.01 or 165.015-- now it reads 165.0125 MHz-- more about that later.

Reader suggestions for making the Registry more useful have always been solicited, and, as you can see, they are given serious consideration and put to good use. Therefore, please permit another reminder that comments and suggestions along those lines are always invited-- as well as new communications data for the listings such as corrections, additions, changes, deletions, expanded data, or whatever. Everything will be put to good use in our efforts to constantly expand and improve each new revised edition.

Actually, hundreds of letters containing frequency data alone arrived in response to the previous edition. All were greatly appreciated and carefully evaluated. The author wishes to take this opportunity to sincerely thank those who took the time and trouble to share their most interesting finds. Also, special thanks to my colleagues Rick Maslau (KNY2GL) and Harry Caul (KIL9XL) for the many lengthy contributions to the data presented here. Furthermore, the author wishes to gratefully acknowledge that invaluable material was obtained from the pages of the excellent newsletter of the All Ohio Scanner Club (P.O. Box 2496, Springfield, OH 45501-2496), to say nothing of the pages of Popular Communications Magazine (76 North Broadway, Hicksville, NY 11801). Your author humbly points out that he is the Editor of Popular Communications Magazine.

Federal Monitoring

It doesn't take too long at the controls of a scanner to realize that there's much more to monitor than the activities taking place on police and fire channels. Modern scanners offer potentials for scanning three hundred channels, so even if you are located in a major metropolitan area, there's plenty of room to expand your monitoring horizons. This point is driven home even harder when you realize that hundreds of MHz worth of spectrum space between 25 and 470 MHz is reserved for the exclusive use of federal agencies! Most scanner owners don't realize this basic fact of spectrum allocation!

When I became interested in monitoring these stations, I found that it usually meant groping around in the dark and semi-dark because of the monumental lack of any kind of data at all for the serious monitor. While listings of municipal, county, and even state communications systems have been readily available for many years, data on federal agencies remained in the twilight zone or in total darkness-- this despite increasing interest by the public in hearing what those in the public's service are spending their time doing-- especially since so much of it is both vital and fascinating! Of course, the popularity of scanners has only

```

At one time it was possible to obtain computer printouts, like like this one, showing details of federal systems.

spurred on this interest.

During the 1930's, and even directly after WWII (when, as a teenager, I got started in monitoring), information on federal agency communications was abundant in the media and could also be obtained directly from many of the agencies themselves. Of course, in those days, the majority of the systems operated between 2 and 30 MHz-- scanners weren't even invented until the late 1960's. Magazines regularly reported frequencies, callsigns, locations of stations operated by the FBI, Border Patrol, Customs, military, and similar.

My own early interest commenced about 1947 with a Hallicrafters S-40A communications receiver. By about 1950, I had converted some military surplus equipment to permit monitoring of the spectrum to 174 MHz since those frequencies had started to become popular. It wasn't long before I graduated to a Regency "Monitoradio" 152 to 174 MHz tunable receiver, and another for the 30 to 50 MHz band. Since that time, I've maintained my own records and files on what the stations were doing. The First Edition

The news media often takes a special delight in running scare stories about sinister uses of scanners and the possession of frequency information on stations that can be easily heard on almost all scanners. The media, however played down the story of the $600,000 lawsuit brought by a New Yorker against a local TV station in August of 1979. He charged that his kidnaped wife's life was endangered when a TV news crew followed him as he was meeting the kidnapers. The suit charged that the TV station had "wilfully intercepted" FBI radio communications to get information on the meeting. The media had been asked to stay away as part of the terms. The woman was later rescued and five men were arrested-- just before the suit was filed!

of this Registry grew out of this interest and information.

As late as the 1940's the FBI HQ station in Washington was using the distinctive callsign WFBI. After WWII, however there was a considerably changed attitude. The government became very restrained about its communications. WFBI's callsign was changed to one more anonymous amidst talk of spies and a general suspicion towards persons interested in monitoring federal comm-communications frequencies.

What had happened was the cold war and the paranoia that led up to the so-called McCarthy era. It's a situation that has been ongoing and continually progressing for more than thirty years now. Even today, the news media carries frequent stories about those who monitor or even know about federal communications systems. These stories invariably take an obligatory shock and fear approach intended to direct suspicion towards those who own scanners.

Right now, the government itself provides virtually no information on its own communications activities with the exception of some FAA and USCG maritime and aeronautical facilities.

While all stations licensed by the FCC are a matter of public record, federal stations aren't licensed by the FCC and don't appear in that agency's records. Federal stations operate under the jurisdiction of several agencies sporting initials such as IRAC, MCEB, and the Department of Defense. Their files are not open to public inspection, even under the Freedom of Information Act. Until as recently as a few years ago, some of these files were available to the public. Unlike FCC-licensed stations, federal agency stations can't lose their licenses for rule violations, and they can't be fined. Therefore, some of these stations tend to be a bit creative and unorthodox in their approach to spectrum use and operating practices.

The Flip Side

To be sure, more people own cars, firearms, flashlights, and crowbars than will ever own scanners. For the most part, there is no sinister or devious intent by these people in their ownership or use of such items, nor is such ownership, in itself, normally cause for suspicion by the government-- even though the relatively small number of persons in our society having criminal intent normally make full and free use of vehicles, guns, and various common tools in their activities.

Nevertheless, when it comes to scanners the rules are quite different, even though the vast majority of scanner owners are honest law-abiding citizens. Whenever a crime is committed by persons having access to a scanner, the news media devotes much hysterical attention to the scanner while failing to tell much at all about their use of cars, guns, etc. This is especially unfortunate since it strives to cast suspicion on all who own and use scanners.

There's no denying that scanners have been included in the equipment used by some criminals. In recent years the news media has reported on a victim of an organized crime extortion who (in cooperation with the FBI) agreed to pay the criminals. Agents relayed the payoff location to other agents by radio. Upon arriving at the payoff location, the victim was searched and beaten by thugs. Agents rushed in to save the victim from serious harm-- they found scanners set to an FBI channel.The car used

to drive there, nor the weapons used to beat the man were not mentioned in the news story.

On July 11th, 1979, foreign nationals engaged in drug trafficking in South Florida opened fire with machine guns on a liquor store in a shopping center. Two rival drug dealers were killed, two innocent bystanders were wounded. The two men were never caught, but inside their abandoned armor-walled van there were scanners tuned to police and federal frequencies.

In California, an outlaw motorcycle gang was accused of monitoring FBI transmissions in order to determine which agent was assigned to investigate suspected illegal activities of the gang. They then telephoned threats to the agent and his family. The news story did not attempt to implicate the telephone company in the potentials for illegal use of their equipment.

With surprising regularity, the news media prints shock value stories about how people have overheard Air Force 1 on their scanners.

In 1984, DEA agents apprehended several suspects while they were tuned in on that agency's communications. The news story's focus was on the scanners rather than on the drugs they were suspected of selling!

On May 12th, 1986, nationally syndicated columnist Jack Anderson told of how, in 1984, "a Los Angeles professor and a graduate student listened in and taped sensitive radio communications of several agencies, including the DEA. They used a $300 scanner..."

Several years ago, newspaper stories reported on the case of a so-called "citizens band radio owner" in Shakopee, MN "who listened in on broadcasts of federal drug and treasury agents." Court records indicated that the 26-year old man monitored the transmissions as agents were watching drug and stolen goods suspects. He then contacted the suspects and told them they were being watched. For this, he was convicted of violating the Communications Act and was sentenced to three months in prison and ordered to spend the following 33 months without owning any communications equipment.

These examples are cited because they indicate that there is, of course, a genuine possibility of malevolent use of a scanner just as there is a potential for anti-social and illegal use of the telephone, cars, hammers, electric hand tools, and so many other things available to the public and used daily by most people without sinister purpose. Equipment doesn't cause crime, criminals cause crime. The information was also presented here to demonstrate the rather unfair spotlight directed at scanners when they are included in the commission of any suspected felony.

There are, in fact, laws governing the reception of radio communications from non-broadcast stations.

Secrecy

Section 705 (formerly 605) of the Communications Act of 1934, 47 U.S.C.A. Section 705, generally prohibits the "use" or "divulgence" of non-broadcast communications except for a few types of signals such as distress calls and Ham signals. Non-broadcast signals, for the most part, are considered private--in fact secret, in just about every sense of the term.

From a practical stanspoint, it means that you can tune a frequency and hear what's going on there, but you aren't allowed

to reveal to any other person or organization the contents of anything you might overhear. The law actually goes so far as to state that you can't personally benefit from the contents of any messages you might monitor or even say to others that a specific transmission took place!

Since this law affects monitors in the U.S. regarding much that is liable to be monitored in any of the bands covered here, it's a good idea to obtain a copy of the Communications Act and become familiar with its restrictions. My description here was intended only to provide a very general idea of the drift of Section 705.

You may also want to read over a copy of the Electronic Communications Privacy Act of 1986 (ECPA) to see how it might relate to your monitoring efforts. Primarily it covers cellular and other mobile telephone calls, scrambled transmissions, and several other categories. The ECPA specifically states that it "shall not be unlawful" for any person "to intercept any radio communication which is transmitted by any governmental...communications system readily accessable to the general public."

That portion of the ECPA (which amends Section 2511(2) of Title 18, United States Code, does permit monitoring of unscrambled governmental communications. Other portions of the ECPA discuss the intent and purpose of such monitoring and specify various harsh penalties for manitoring for numerous tacky purposes. The ECPA is also worth reading if you're a scanner user-- also read any local and state laws that may govern mobile scanner usage in your area.

Obviously, common sense and discretion comprise the unwritten laws that are all-important, notwithstanding the laws set down on the printed page in legal books.

Privacy

Most federal agency transmissions are sent out "in the clear" (that is, unscrambled) within the 25 to 470 MHz bands. Since these bands lie within the operating range of virtually all scanners, it is possible to monitor them without much difficulty.

All agencies are aware that their communications are able to be monitored, and all have the option to scramble their transmissions in order to achieve a degree of privacy when sending traffic they don't want you to hear. Several agencies do scramble some of their communications as they determine necessary.

Unlike the scrambling methods used by some non-federal agencies, which are relatively easy to unscramble (although the ECPA now makes it illegal to do so), scramblers used by federal agencies (also covered by the ECPA) cannot be unscrambled very easily by outsiders. These are digital type hi-tech scramblers and, although there have apparently been a few successful attempts at unscrambling them, they remain beyond the comprehension of equipment available outside of the agencies involved.

Digital scrambling, when heard on a standard scanner, sounds like a hiss or a rushing sound. It has no voice components.

Drawing The Line

There's a line that separates some federal and non-federal systems, and it isn't etched in granite. While some non-government stations are allowed to operate at federal installations and even on frequencies reserved for federal agencies (for instance, some

state forestry conservation, law enforcement activities, or government contractors, and some Texas/Mexico border county sheriffs that operate on Border Patrol frequencies), federal agencies can pop up on channels normally used by non-federal stations.

Federal agencies that can show up on nominally non-federal frequencies include agencies whose personnel can communicate within certain local or state law enforcement networks. It also includes the USCG and several agencies that can operate on CB channels. Several enforcement agencies utilize cellular mobile telephones to augment their own communications systems, and the FCC can operate on any frequency of its choice for any specific reasons it deems necessary.

This Registry is primarily concerned with federal agency activities within those frequency bands reserved for the exclusive use of federal stations. Exceptions have been made where they were deemed to be relevant. Also, as an extra, some 2 to 25 MHz frequencies of special interest have been included.

Putting It All Together

Besides my own personal files and the information so generously sent in by users of this series of Registries, I've been most fortunate in being able to exchange information with a number of long-time friends who share my interest in federal communications systems. Also, I've attempted to double check some of the listings against information in the files of the International Telecommunications Union (ITU) in Geneva, Switzerland. This has resulted in some conflicting and seemingly incorrect information, and has caused me to make various assumptions, presumptions, and educated guesses.

Obviously, there is much information still left to try to assemble, and agencies that are not included herein. And, yes, I am fully aware that, despite herculean efforts to keep the information as current, correct, and complete as possible, there is some incorrect, conflicting, and even outdated information in in this Registry. My hope is that as more and more information is received, we will continue to fine tune the accuracy and completeness of our data.

So, if you are one of those readers who delights in going through these Registries, line by line, to try and catch me in a royal snafu, rather than writing to display your delight in nailing me, I would much prefer your providing any correct, updated, or missing information or opinions you might have that would constructively result in a clarification.

Everything in this Registry should be viewed with these factors in mind. Because of the nature of the stations listed herein-- notwithstanding the guesses and gaps-- it's all mostly speculatory and unofficial with nothing having any status better than that-- including frequencies, callsigns, ID's, locations, etc. We assume and hope that most of what we have is reasonably correct, but we guarantee nothing and are constantly on the search for improved accuracy.

Frequency Department

Federal agency communications systems predominate on certain bands. It is within these bands that the FCC does not normally license systems. These are the bands of most concern in this Registry. So, within the scope of our listings, we are

primarily concerned with the "exclusive" federal bands, which are as follows:

25.33 to 26.10 MHz
26.48 to 26.95 MHz
27.54 to 28.00 MHz
29.89 to 30.51 MHz
32.00 to 33.00 MHz
34.00 to 35.00 MHz
36.00 to 37.00 MHz
38.00 to 39.00 MHz
40.00 to 42.00 MHz
46.60 to 47.00 MHz
49.66 to 50.00 MHz
136.00 to 144.00 MHz
148.00 to 150.80 MHz
157.04 to 157.19 MHz
162.02 to 173.20 MHz
173.40 to 174.00 MHz
225.00 to 420.00 MHz

Since most scanners have a "search/scan" mode, try placing your scanner in that mode and exploring each of these bands one at a time in 500 kHz segments. You may discover new and interesting frequencies! When "skip" conditions are right in the 25 to 50 MHz bands, you're likely to hear stations from hundreds or even thousands of miles in the distance. When searching for new frequencies, search at the fastest speed your scanner will operate-- and be prepared to let the unit search and re-search the same group of frequencies for several days at a time.

It's worth noting that not all scanners operate below 30 MHz, or can tune in the 200 to 400 MHz band. If the scanner can operate from 200 to 400 MHz, remember that almost all communications there are (as with aero communications in the 118 to 135 MHz band) in Amplitude Modulation (AM) mode-- **not** in FM, as on most other scanner bands. Those transmission activities you'll hear between 2 and 30 MHz on frequencies listed in this Registry will either be USB (or sometimes AM) mode.

Keep in mind that some federal agencies have available for their use a large assortment of VHF/UHF frequencies. Moreover, their stations are under no FCC restrictions to stick to only one (or a small assortment) of frequencies. Those agencies involved in various enforcement, regulatory, or other security activities do tend to shift and change frequencies from time to time, although they will probably continue to stay within their normal stable of available frequencies. Sometimes a frequency may be quite active and lively for a period of months and then suddenly it goes totally silent and remains that way for several more months. That's why it's worth your time to use your scanner's "search/scan" feature from time to time. By looking at the frequencies shown in this Registry for a given agency, you can get some idea of the regions of the spectrum that are believed to be used by that organization.

In previous editions of the Registry we made a valiant attempt to match up specific frequencies with specific locations for various agencies. With those agencies that switch around their frequencies, this caused some amount of confusion and

consternation when those listings couldn't be reconciled by actual monitoring. This fact caused an unintentional built-in obsolescence to many listings. In this Sixth Edition, we have endeavored to avoid this by explaining the practice and suggesting to our readers that the activities of several major agencies should be regarded as being quite flexible and prone to sudden changes.

Some agencies using VHF/UHF repeaters have the ability for their mobile and hand-held units to operate in simplex (single channel) format on the repeater's output frequency. This permits them to bypass the wide-area repeater and achieve short-range communications while still allowing them to monitor the repeater. In such instances, the mobile units might say they are switching to "F-2" or "Charlie 2." Monitors not within a couple of miles of these low powered units might not be able to hear their transmissions once they have decided to "talk around" the reapeater. This capability has been employed in surveillance work and, in fact, is often called "repeater talk around."

Other interesting surveillance and tactical systems include cellular mobile telephones (870 to 890 MHz band-- now illegal to monitor per the ECPA), and also low-power hands-free FM transceivers normally used by hikers, bikers, backpackers, and campers. The hands-free units have about a 1-mile range and can be found operating on 49.67, 49.77, 49.83, 49.845, 49.86, 49.875, 49.89, 49.93, 49.97, and 49.99 MHz-- same channels as the handset portion of cordless telephones.

In our listings, when repeaters appear to have a standardized national channel pairing, we have shown both frequencies together as "166.90/166.30." The first frequency shown is the reapeater output channel; the one you'll probably want to monitor at your station. The other frequency listed is the input channel-- you'll probably not normally monitor that. In instances where agencies have non-standard pairs that vary from area to area, the output and input listings are all shown as separate individual frequencies. This is also used when standardized frequency pairs are in use, but are not known

Just for the record, and in case you were wondering, there hasn't been any effort to deliberately censor any of these listings under any (perhaps) insolent assumption on the part of the author that he is in a position to tell you what you shouldn't monitor on your scanner, especially since everything in this Registry is unofficial and, in the long run, not much more than guesswork. Any person with an easily available scanner can tune in on and even take frequency measurements on every single frequency listed herein. Moreover, the national media has several times noted that those who are suspected of being up to no good already have determined the frequencies that are of interest to them-- just as you might have expected they would!

Fractured Frequencies

I've noticed a continuing confusion regarding what might best be termed "fractured frequencies." That is to say, frequencies that go out to four places after the decimal point-- such as 165.0125 or 173.4875 MHz. Earlier in this Introductory section, I mentioned that that's the way they are listed in this edition.

In several portions of the VHF spectrum, federal agency stations (for some rather obscure reason) are operating on frequencies that are slightly out-of-kilter with order and rationality. Instead

of having frequencies such as 164.025 or 166.375, they operate on bizarre frequencies like 171.3125 and the like.

Take 165.0125-- the blasted thing is halfway between 165.012 and 165.013 MHz. If you attempt to program it into many scanners the unit will accept your instructions but the readout will advise you that your equipment is tuned to 165.010 or 165.015 MHz. This is quite obviously not the instructions that were programmed in and the turn of events has caused no little consternation in the minds of many scanner owners who are certain that the crafty feds have gone to great lengths to concoct frequencies that are beyone the tuning abilities of their Little DeLuxe Super Hooperdyne scanning machine. Nothing could be further from the truth!

Fact is that setting a scanner to monitor either 165.010 or 165.015 MHz will bring in 165.0125 MHz activities without any problems at all. This is because FM communications in this band are 16 kHz wide-- that means that they extend out about 8 kHz to either side of the center or assigned frequency. Your tuning only 2.5 kHz above or below that frequency makes absolutely no practical difference in the signal strength or audio quality of the stations on 165.0125 MHz.

Still, many scanner owners have expressed distress and confusion about their inability to get their scanners to perform the tricks expected of them in exactly the way the instructions were given. Since it made no practical difference anyway, in previous editions of this Registry, I attempted to solve the dilemma by simply rounding off those freaky frequencies to the closest 5 kHz. So 165.0125 was listed as 165.01 or 165.015 MHz. A good idea, I thought.

Of course, not all scanners had that problem; being quite at ease when their owners programmed in the oddball frequencies. Folks who had such scanners tended to write me outraged and offended letters of a most hysterical nature in which I was described in terms of being a great defiler of frequencies and progenitor of deliberately misleading information. Whether these people were absolute purists, or whether they didn't understand anything about FM signals, I do not know. However, since many of the newer breed of scanners will accept programming of this type, I have decided to run them, pure and unadulterated, in all of their glory, and let the devil take the hindmost.

However, I believe that I have now explained all of this sufficiently well to excuse myself from having to further explain it to those who will again write to me to ask why their scanners refuse to accept the programming for these fractured fractional frequencies.

Another thing that causes confusion to some is the manner in which VHF frequencies are written out as regards to the number of places shown after the decimal point. For brevity and convenience, certain styles and formats for writing out frequencies have become somewhat standardized within the field of communications. I was not the person who established these formats so I can neither defend or fully rationalize their origin, history, or evolution. I have, however, used them in this Registry.

Aeronautical frequencies don't normally show any zeros after the final number after the decimal point-- so you're liable to see 123.1, 117.975, 354.0, 227.7, or 121.9625 MHz. Yes, it would not be technically incorrect to refer to 123.1 as 123.10

or 123.100-- they all mean the exact same thing, just as 227.7 MHz might also have been written 227.70 or 227.700 MHz-- but that's not the way its normally done.

Other VHF/UHF channels, if they have only one number after the decimal point, are given a single zero added on (as in 164.30, 167.10, etc.). If a frequency has two numbers behind the decimal point or a zero and a numeral, it gets no additional zero (as in 166.75 or 163.05 MHz). While writing 166.750 or 163.050 would not be incorrect, it's not normally done that way-- and I have not bothered with such in these pages. Frequencies going out to three or four numbers after the decimal point (as in 165.375 or 164.9125 MHz) are written out that way in this Registry.

Activity Status

As mentioned, some agencies do a bit of switching around within their regular frequency groupings. There is no way of showing that any given frequency is used in a particular area at this time, or that if frequencies of a particular agency are not listed for your area, they aren't in use-- they might well be! If you want to try to get the best possible shot at hearing everything available, periodically monitor every frequency listed for your favorite agencies in addition to search/scannning as explained earlier.

Remember, too, that some frequencies are reserved for special purposes and, as such, may be active on an occasional basis rather than going full blast each and every day. Some military channels may be used only for maneuvers, war games, or for checking "ready status." Others may be used only for emergency purposes, or during tactical or surveillance operations.

The fact is that no channel can be declared to be fully "dead," nor can you be assured that stations you hear today will be there tomorrow. That's all part of the unique excitement and adventure of federal frequency monitoring. That's what separates this type of monitoring from the standard police and fire fare.

Frequency Expansion Tricks

There are a myriad of frequency expansion tricks that purport to enable scanners to cover far more frequency spectrum than originally designed into the unit. Quite a bit of mail comes in asking about such tricks, some of which require long and complicated programming sequences. Without attempting to describe any of these specific programs, permit me to say that some work and others are worthless.

One reader sent in complex programming instructions intended to permit a Bearcat 250 scanner to tune down in frequency as low as 15 MHz. Just for laughs, I tried the program and I must admit that the frequency readout LED's did actually show 15 MHz-- but just because the LED's could be forced or fooled into giving out with a certain reading, it didn't mean that the Bearcat 250 was going to actually operate there.

The circuits within a programmable scanner drop off in efficiency very sharply as soon as the upper and lower design parameters are exceeded. The lower design limited of the Bearcat 250 are at 30 MHz; chances are that even if the set could be reprogrammed below 30 MHz, more than 500 kHz away from that frequency it would work like a stone. Moreover, since the Bearcat 250 will receive only FM, it would be of little value on bands where transmissions are SSB, AM, CW, and RTTY!

This was just one example of a supposed programming trick, a typical example. Those programming tricks that purport to enhance a scanner's capabilities within its original frequency limits may be of more significant value, such as those that allow you to enter split or "in between" fractured frequencies. Also, programming stunts that take advantage of harmonics in order to tune through the 406 to 420 MHz federal frequency band do work on at least some scanners.

The Radio Shack Realistic PRO-2004 300-channel scanner was originally supposed to cover 25 to 520 MHz and 760 to 1300 MHz. When it reached the stores it had been redesigned so that the cellular mobile telephone bands couldn't be scanned, this because the manufacturer elected voluntarily to remove the unit's ability to scan frequencies outlawed by the ECPA. Scanner owners lost no time in figuring out that it took no more than the simple removal of a single diode on the CPU chip (in a shielded case under the chassis) to instantly restore the cellular frequencies.

I bring this out to show that scanner owners are resourceful, but there are limits to what can be done to improve things. If you want to experiment with programming expansion techniques, by all means so so. They often appear in club newsletters and are worth a try if you've got some spare time. But, don't expect miracles-- most manufacturers would have figured out how to capitalize on anything significant their equipment could be taught to do. No??

Antennas

The built-in telescoping antennas that come with scanners do a fairly decent job for strictly local-area reception. Antennas that are going to offer you long-distance reception will have to be mounted outdoors-- as high as possible and far clear of any obstructions and power lines. These will bring in the weak stations and mobiles off in the hinterlands-- or in the big city if you happen to be situated in the boonies. Really good commercial antennas made for scanners are available at all electronics stores that sell scanners-- tell the salesman what your needs are and ask for his suggestions.

You'll also want to ask him about the use of low-loss coaxial cable to go between your scanner and the antenna. If you've got a run of 50 feet or less, you can get away with standard 52-ohm RG-58/U, the cheap stuff they sell for CB use. If you are going to go more than 50 feet, best bet is to think about getting more expensive RG-8/U or RG-8/M cable. Just make certain that they do not send you out of the store with 75-ohm RG-59/U or RG-6U cables since they are intended for TV sets and not for communications equipment.

If you have more than one scanner, you can probably operate them all from the same antenna if you use a splitter. Be aware, however, that some programmable scanners (when mounted near one another on a desktop) tend to interact with one another. This means that they may lock up and stop scanning, tantalized by low level signals emerging from the oscillator circuits of the neaby set. No harm done, but it's annoying and not at all uncommon.

I should point out that if you intend scanning over a wide spectrum of frequencies, you're going to have to take this into account when selecting your antenna system. There are now

several really good antennas that are designed to effectively work on all frequencies between 30 and 500 MHz. If you get a single-band antenna you may find that it gives only so-so results on other bands, especially those lower in frequency. Yet, I have had surprisingly good reception on the 800 MHz band using a base station phased array cut for 156 MHz!

Also, although not actually intended for scanner use, I've been generally impressed with the results obtained with omni-directional antennas made for CB and the VHF/UHF Ham bands. A CB base station antenna usually does a good job receiving from 25 to 40 MHz. A 6 meter (50 MHz) band antenna works fine from 30 to 50 MHz, while a 2 meter nand (144 MHz) antenna does a respectable job of receiving from 118 to 174 MHz, and a 220 MHz antenna is great on the 225 to 400 MHz band. And, as you might expect, a 430 MHz band Ham antenna is fine for receiving between 300 MHz and 500 MHz.

One last thought on antenna systems. Your scanner's ability to hear weak signals is dependent to a great extent upon the way the receiver is connected to the antenna. For safety's sake, use a lightning arrestor, and don't ever attempt to erect any antenna where it could come into contact with electric power lines either while it's being installed or after it's been put into operation.

Moreover, the connectors used at each end of the coaxial cable have to be correctly hooked up (a common problem) and the connection to the antenna should be covered with a good moisture sealant to keep the weather on the outside.

Although it may creep up on you somewhat sneakily, your scanner's ability to pull in those weak stations may be greatly diminished after a period of time as your scanner goes slowly deaf. It's so gradual that you won't even notice it taking place. The problem is the coaxial cable-- it doesn't age very well at all, and as it gets long in the tooth it doesn't do as good a job as it did when it was new. Out there in the rain/snow/sleet/ice/sun, it most definitely begins to feel mightly low. Every year you should check its outer covering to make certain that it is free of cracks, splits, holes, punctures, etc. If you see any signs of damage or aging, replace the whole thing. No matter how good it looks, after four years in service you should seriously consider sending it to its final reward-- you'll notice the difference immediately!

Getting A Handle On It All

As you get used to monitoring the federal frequencies, you'll possibly find that you have become a minor but nontheless well-informed "intelligence gathering" operation. You begin to get the feel of how various agencies operate, use their frequencies, identify their stations, dispatch their vehicles. You'll be surprised to learn that some agencies that are ostensibly "undercover" boldly identify their base stations over the air by the names of the communities in which they are located. You'll start to see that certain frequencies are used for surveillance or tactical operations, others used for administrative or maintenance activities.

Before long you'll start to see patterns of operation that weren't at first apparent. This frequency being tied into operations on that frequency, or coordinated with activity of another agency on another group of frequencies.

A selection of federal QSL's from an earlier, more innocent, era. It's still possible to get them from a few agencies.

Be certain to take advantage of newsworthy events to help you locate and identify new stations and frequencies. Major crimes, forest fires, publicized military maneuvers, weather emergencies, visiting dignitaries, earthquakes, major pollution problems, nuclear hazards, civil unrest-- all tend to bring into operation various frequencies within the federal bands that might otherwise be relatively quiet.

Keep a detailed record in a card file or logbook of newly discovered frequencies and your own comments and observations on the activity there. Note any "mystery" frequencies so that you can go back and check them out at later dates-- write down the ID's used, any locations mentioned, your hunches, etc. Eventually you'll compile enough information to get a handle on the station or at least make a reasonably good guess.

Always maintain a discriminating outlook. Some programmable scanners bring in 144 MHz Ham band signals near 167 MHz-- or other unwanted harmonics in the 118 to 135 MHz VHF aero band. Apply enough common sense to what you are doing to realize that these are obviously harmonics and that few Hams would actually transmit in a band that is the stomping ground of the FBI-- and more than 20 MHz outside of the authorized Ham band!

My own record of being misled isn't without blemish. One time I picked up a station on a commercial two-way frequency. It was obviously sending a message relating to a nearby federal facility-- many names and addresses were being tossed around. It was a logical deduction and I figured that I had stumbled upon some deep-undercover fed operation set up out-of-the-way on a business-band frequency. I spread the word to some carefully selected local cronies only to be unhappily surprised to learn that I had been tuned to a pizza parlor making routine deliveries to the federal installation. Pepperoni, anybody?

You might wish to keep this in mind as you do your exploring.

QSL's?

It's almost ironic to discuss getting QSL's from stations operated by federal agencies, although there are those who actively pursue this aspect of the hobby. For many years I was into it myself, and came away with excellent results. That was, however, in times when the government was somewhat less uptight about those who monitored and had knowledge of its communications activities-- and before at least one communications equipment manufacturer began insinuating that communications monitors were some sort of "gangster element."

It's probably futile, and also counterproductive, to attempt to verify any enforcement or security agency stations-- but you may have success with agencies such as NOAA, the National Park Service, TVA, etc. Just don't get too specific about the actual content of the transmission other than stating the date, time, and identification of the station called or worked. Mention the frequency, and tell about your station and your hobby. Ask them to verify that you heard their station and you may be rather pleasantly surprised.

I hope that you will share with me the results of your monitoring efforts. Write to me in care of the Publisher of this Registry-- your cooperation and information will be sincerely appreciated and included in the next edition.

Military & Other Federal Installations Including Selected Major Government Contractors, & Military Frequencies at Civil Airports

All frequencies listed after each usage code relate to the service it describes. The usage codes and abbreviations include:

AD	Aircraft approach and/or departure communications
AF	USAF or Air National Guard
AFR	USAF US Air Force Reserve
AFS	Air Force Station
ALCE	Airlift Control Element
ANG	Air National Guard
Army	Army or Army National Guard
CG	US Coast Guard
CID	Criminal Investigation Division
CP	Command Post
DEW	Distant Early Warning
DI	Pilot-to-Dispatcher service
E	Aircraft clearance delivery
EOD	Explosive Ordnance Disposal
FD	Fire Department
FEMA	Federal Emergency Management Agency
FSS	FAA Flight Service Station
G	Aircraft Ground Control
HF	High Frequency operations (2 to 30 MHz)
MAC	US Air Force Military Airlift Command
Maint	Maintenance operations
MCAF	US Marine Corps Airfield
Msc	Miscellaneous
Muni	Municipal Airport
NAF	Naval Air Facility
NAS	Naval Air Station
NG	Army National Guard
NORAD	North American Air Defense
NRG	Dept. of Energy
NWF	Naval Weapons Facility

Federal Government Vehicle License Plates

Some states issue their own license plates to federal vehicles, but many vehicles also use the standard white/blue plates issued by the government. Undercover vehicles use state-series plates that aren't listed in MV computers. According to "The License Plate Book," by Thomson C. Murray (Interstate Publishing Co. Inc., Cleft Road, Mill Neck NY 11765), the following prefixes are used on some of the white/blue plates to identify the agencies:

A	Dept. Agriculture
AF	Air Force
C	Commerce
CE	Army Corps of Engineers
CPSC	Consumer Prod. Safety Comm.
D	Dept. of Defense
DOT	Dept. of Transportation
EO	Exec. Office of the President & National Security Council
EPA	Environmental Prot. Agcy.
EPS	Executive Protection Svc.
FA	Federal Aviation Admin.
FC	Federal Communications Comm.
FR	Federal Reserve System
G	GSA Interagency Motor Pools System
G-11 to G-19	GSA Motor Pool sedans
G-21 to G-23	GSA Motor Pool station wagons
G-31	GSA Motor Pool ambulances
G-51	GSA Motor Pool sedans
G-52	GSA Motor Pool station wagons
(all other G-41 to G-91 are trucks)	
GA	General Accounting Office
GP	Government Printing Office
GS	Gen. Svcs. Administration
H	Housing & Urban Development
I	Dept. Interior
IC	Interstate Commerce Commission
J	Dept. Justice
L	Dept. Labor
N	U.S. Navy
NA	N A S A
NRC	Nuclear Regulatory Commission
NS	National Science Foundation
P	Postal Service
SI	Smithsonian Institution
T	Treasury
TV	T V A
W	Army

AGRICULTURE, U.S. DEPARTMENT OF

The USDA's Forestry Service an active communicator, although little in the way of frequency information regarding the agency has ever been presented to the scanning public. Because the National Forests have become so popular with marijuana growers and wildlife poachers, the USDA has had to take an ever-increasing role in the area of enforcement. Even in metropolitan areas, the USDA plays an important enforcement protecting the public against adulterated, unclean, or spoiled food. Actually, the USDA is involved in a myriad of rural and urban programs that are interesting to monitor.

The Forest Service's 229-million acres are fitted out with no less than eight surveillance systems ranging from telephone taps to closed-circuit TV. Mail interception is also used. Sensors are placed throughout the National Forests that keep tabs on human and animal activities. Even with these aids, a special force, 500-strong, has had to be deployed in an attempt to locate the illegal marijuana growers. This force works in close cooperation and coordination with the DEA.

We list herewith, some of the USDA's frequencies in metropolitan areas, the USDA's primary national frequencies for fighting forest fires, and all of the known USDA frequencies used at National Forests (NF) and National Grasslands (NG). In instances where 415 MHz band channels are shown, these are repeaters that have input channels exactly 4 MHz lower than the repeaters (i.e., repeater on 415.525 MHz picks up transmissions on 411.525 MHz) and we have not listed the 411 MHz channels. There may be additional USDA channels used with the National Forests, we would appreciate monitors letting us know any they know about.

Some Coded & Tactical Identifiers for Aircraft & Ground Stations

Acrobat	Andrews AFB, Camp Springs, MD
Afkai 01 to 99	Tactical Operations flight designators
Afkai (word) 01 to 99	89th Military Air Wing flight designators
Agar 01 to 99	Designator for a EC-135N aircraft
Airevac 01 to 99	Air evacuation flight designator
Air Force 1	Presidental plane (President aboard)
Air Force 2	Vice Presidential plane (Vice President aboard)
Air Force Rescue + digits	Designator for Search/Rescue aircraft
Air Rescue + digits	Designator for Search/rescue aircraft
American Eagle	Commando Escort unit designator
Aria 01 to 99	Type EC-125N airctaft of 4050th Test Wing, Wright-Paterson AFB
Army 1	Any US Army helicopter with President of US aboard
Army 2	Any US Army helicopter with Vice Pres. of US aboard
Cape Radio	USAF Eastern Test Range, Cape Canaveral, FL
Capsule	Designator signifying a general message addressed to all MAC aircraft
Copter + digits	Helicopter designator
Crown	White House Communications Agency
Denali	MAC Alaskan Airlift Control Center, Elmendorf AFB
Discard	MAC, 22nd AF, Travis AFB
Dropkick	SAC Headquarters, Offutt AFB
Edgy + digits	Aircraft of 552nd AWACS, Tinker AFB
Electric	National Emergency Airborne Control Post
Executive 1	Commercial flight with President aboard
Executive 1-Foxtrot	Commercial flight carrying family of President
Executive 2	Commercial flight with Vice President aboard

Executive 2-Foxtrot	Commercial flight carrying family of Vice President
Fireside 1	TAC Headquarters, Langley AFB
Fireside 3	HQ 9th AF, Shaw AFB
Fireside 4	Mountain Home AFB
Fireside 5	HQ 12th AF, Bergstrom AFB
Fivespot	Commando escort unit designator
Fletcher	Commando escort unit designator
Flynest	Nuclear & Chemical/Biological Warfare Disaster Team
Format	HQ 21st AF, McGuire AFB
Furious	MAC, South American Airlift Control Center, Panama
Gold Coin	Strike Control Command, MacDill AFB
Golden	General net air/ground callsign used by aircraft seeking to contact any TAC ground station
Gull	53rd Weather Recon Squadron, Keesler AFB
Hilda	MAC Command Center, Scott AFB
Jolly 01 to 99	Search/Rescue helicopter not on mission
King 01 to 99	Search/Rescue aircraft not on mission
Lark	55th Weather Recon Squadron, McClellan AFB
Letterman	Weather Forecaster, Hickam AFB
Mac + digits	Designator for an aircraft of Military Airlift Command
Mainsail	General net air/ground callsign used by any aircraft wishing to contact any GCCS ground station
Marine 1	USMC helicopter carrying President of US aboard
Marine 2	USMC helicopter carrying Vice President of US aboard
Medevac + digits	Evacuation flight equipped with medical facilities
Minuteman	Air National Guard Operations Center, Andrews AFB
Nighthawk	USMC helicopter of Marine Squadron 1, Quantico, VA
Pedro 01 to 99	Rescue aircraft assigned to a local base
Phantom	MAC European Theatre Airlift Control Center
Queen	Air Rescue Operations Center, Eglin AFB
Sam + digits	Special Air Mission VIP flight (Military or Diplomatic)
Sam 01	VIP flight, foreign head of state aboard
Sam 26000	Presidential backup aircraft, President not aboard
Sam 27000	Presidential aircraft, President not aboard
Sam 31682	Vice Presidential aircraft, Vice President not aboard
Sam 86971	US Secretary of State aircraft
Sam 86972	US National Security Advisor aircraft
Save 01 to 99	Rescue aircraft assigned to a local base
Sentry	AWACS aircraft from Tinker AFB
Skybird	General net air/ground callsign used by an aircraft wishing to contact any SAC ground station
Skyking	General net ground/air callsign used by ground stations wishing to send traffic to all nuclear forces & support groups
Spar	VIP aircraft of 89th Military Airlift Wing
Spar 01-99	Special Air Mission, lower priority than "Sam" mission
Swan	54th Weather Recon Squadron, Andersen AFB, Guam
Teal	815th Weather Reacon Squadron, Keesler AFB
Tonight	MAC Pacific Airlift Control Center
US Air Force + digits	Flights over foreign territories
Venus + digits	Sam aircraft, VIP's not aboard
3 letter word + 3 digits	Student pilot on training mission
3 letter word + 4 digits	MAC/TAC Civil Disturbance airlift
4 letter word + 1 digit	TAC Combat Crew Training Mission
3-5 letter word + 2 digits	SAC bomber or tanker
6-15 letter word or 2 words	SAC ground station

Ground Wave Emergency Network (GWEN)

The USAF is presently in the process of implementing this communications system intended to permit the passage of emergency messages from government officials to SAC bases and & missile launch sites after an initial nuclear exchange with the USSR. Some 500 sites are eventually expected to be operational with less than 1 kW ERP on frequencies between 150 and 175 kHz. Communications announced as packet switched at 75 baud using 100 bits/packet. This may have been modified to either 75 baud using 64 bits/packet, or 150 baud using 128 bits/packet.

ALASKA RAILROAD

Frequencies reported:

FEDERAL COMMUNICATIONS COMMISSION

For many years, VHF monitors have been interested in monitoring the operations of the FCC. One of the popular beliefs has been that the FCC uses 41.06 MHz from its mobile vans-- but nobody has reported actually monitoring one there. Other sources have reported that the agency's office in Long Beach (CA) operates in the aero band on 127.125 MHz, while the Washington (DC) office uses 37.50 and 153.185, with the offices in nearby Laurel (MD) on 168.35 MHz; but, again, such activity has never been confirmed. There are other reports of FCC activity on 408.00, 418.00, and even 869.00 MHz; although nobody has yet confirmed this to us here.

When it comes to VHF, the primary two-way activities appear to be on 167.05/172.80, a frequency pair which was first revealed to monitors in an earlier edition of this Registry. The FCC vans are also equipped with CB transceivers, not only for monitoring but also for communications purposes. In actual fact, FCC personnel are able to come up on any frequency they wish, and they regularly do so to communicate with one another and with various licensees.

On the HF bands, we were also the first to publish the complete listing of those frequencies, although they do not appear to be in especially heavy use any longer. One monitor reports that bit inversion techniques are no longer used on the RTTY channels. For the time being, we will continue to carry these HF frequencies in this Registry.

Note than on VHF, most stations appear to still use tactical ID's such as "L4" and "D7." We show these along with their known callsigns. HF stations use standard 3-letter 2-digit callsigns and these are also listed.

HF Channels

Channel 1	2220 kHz	Some mobiles using CW
Channel 1A	2295 kHz	Monitoring stations using RTTY
Channel 2	4483 kHz	All mobile units, SSB/CW
Channel 2A	5133 kHz	Monitoring stations using CW
Channel 2B	5373 kHz	Monitoring stations using RTTY
Channel 3	7790 kHz	All mobile units, SSB/CW
Channel 3A	7604 kHz	Monitoring stations using CW
Channel 4	10655 kHz	All mobile units using CW
Channel 4A	10902 kHz	Monitoring stations using CW
Channel 5	13830 kHz	Monitoring stations using CW
Channel 5A	13493 kHz	Monitoring stations using RTTY
Channel 5B	13990 kHz	Monitoring & Mobile stations using SSB/RTTY/CW
Channel 5C	13992 kHz	Monitoring stations using RTTY
Channel 6	18050 kHz	All mobile units, CW
Channel 6A	19230 kHz	Monitoring stations using RTTY
Channel 7	22964 kHz	All mobiles, CW
Channel 7A	23035 kHz	Monitoring stations using RTTY
Channel 8	41.06 MHz	Mobiles & Bases (FM)

CUSTOMS SERVICE, U.S.

About 76,000 aircraft cross U.S. borders each day, while 160,000 registered boats and 174 registry vessels arrive daily in U.S. ports. This is is how contraband (drugs, cash, film, video tapes, electronics equipment, gold, diamonds, furs, cameras, cigarettes, whiskey, stolen art treasures, antiquities, ivory, exotic wildlife, weapons and ordnance, industrial equipment, documents, rare stamps, and more) enters the nation. Although the primary targets are those who smuggle narcotics, and the efforts to stop the smuggling are the combined efforts of several federal agencies, it is the Customs Service that appears primarily motivated towards the cause of halting all types of contraband.

During a 10-week experiment conducted by the Customs Service, two highly sophisticated military aircraft flew patrols over the Caribbean waters southwest of Florida. These were Grumman E2C-Hawkeye aircraft, $28-million electronics surveillance planes. The E-2C is an unusual looking prop driven plane carrying above its fuselage a rotating 24-foot disc that serves as a radar antenna that can detect ships, aircraft, and even land vehicles at ranges of 200+ miles.

The experiment was a success. A total of 28 pilots and 34 other persons were arrested during the operation, and 25 aircraft, 26,000 pounds of marijuana, 1,000 pounds of cocaine, and 50 pounds of hashish were seized-- and, still, Customs Service officials knew that many smugglers were able to evade their patrols. About half the illegal cocaine that arrives in the nation (somewhere perhaps as much as 45 to 50 tons per year) arrives by air, along with about 60% of the marijuana.

Although main areas for the entry of illegal drugs are in south Florida, and in the areas of Santa Cruz and Cochise Counties of Arizona (so-called "Cocaine Alley") smugglers have started to expand their operations to many other entry points. The Customs Service is therefore active along all of our coastlines and even in the interior of the nation.

Coastal patrols (which are done in coordination with the Coast Guard and other federal agencies such as the DEA) are still most concentrated in Caribbean and Atlantic areas and have been widely monitored on shortwave. Scanner owners throughout the nation also report Customs Service activities on a myriad of VHF frequencies.

HF networks operate with stations using tactical identifiers on a large number of frequencies. Each frequency appears to be known by a code name, such as "Hotel," or "Yankee Charlie," etc. Those known as E ("Echo"), G, H, P, and ZD are most frequently mentioned by monitors. Information is, of course, incomplete and mostly guesswork, but the following has been assembled from information reported by HF and VHF listeners to publications, club newsletters, and directly to us.

Most active VHF frequencies: 165.2375/166.4375 165.2875 165.5375 165.7375 166.4375 166.4625 166.5875.

Other VHF/UHF frequencies: 120.35 120.75 123.325 123.45 124.7 126.3 126.8 133.2 134.3 134.4 135.5 162.825 163.00 163.225 163.675 164.10 165.3375 165.6875 165.9125 165.95 166.20 166.40 168.63 169.535 171.25 255.6 269.3 281.4 297.2 299.2 353.9 354.2 381.5 418.225.

HF frequencies and their phonetic identifiers: 2808.5-XA, 4500-ZA, 4991-XB, 5058.5-XC, 5277-A, 5527, 5571-YB, 5841-B, 7300-C, 7527-ZB, 7657-F, 7778.5-XD, 8912.5-YC, 9238.5-XE, 9497-D, 9802-ZC, 11076-E, 11246, 11288-YD, 12222-ZD, 13312-YE, 14350-L, 14686-P, 14690-G, 15867-ZE, 15953.5-XF, 16141-Hornet 4, 17601-XG, 18666-H, 19131, 23403-R, 23675-I. Standard phonetics are used, such as Yankee Delta, Romeo, etc.

Customs service aircraft include:
N32RU (DC-6 aircraft), N227ES (Beech Bonanza 2A-50), N732XE (Cessna 210M), N1125J (DC-6), N2589Z (Cessna 337), N3766C (Beechcraft Baron 35), N7020L (Cessna 310-K), N90667 (Piper 600).

WYJ9937	boat CF-0673-F
WYJ9938	boat CF-1559-F

Miami (FL) Office unit numbering system consists of the digit "4" (representing District #4) followed by a word representing the type of unit, followed by the individual unit's numbers based upon the specific office within District 4.

Type of unit: Alpha = Agent; Charlie = Radio Shop; India = Inspector; Lima = Aircraft; Mike = Marine Patrol; Omaha = Aircraft; Oscar = Local Police; Sierra = Internal Affairs; Tango = Tactical Enforcement Support Team (TEST).

Individual Unit #'s: 100 to 199 = Miami Office; 600 to 699 = West Palm Beach Office; 701 to 799 = Tampa Office; 800 to 899 = Jacksonville Office; 900 to 999 = Savannah, GA Office; 1400 to 1499 = Naples Office; 1500 to 1599 Fort Lauderdale Office; 1600 to 1699 = Key West Office; 2300 to 2399 = Fort Pierce Office. Others not known.

Therefore, Unit 4-Mike-1526 would be a marine patrol vessel of the Fort Lauderdale Office; 4-Lima-843 is an aircraft from the Jacksonville Office. Sometimes the first digit isn't used and the units might ID as Mike 1526, or Lima 843.

DRUG ENFORCEMENT ADMINISTRATION

Frequencies below 174 MHz may be primarily used for coordination with the Customs Service (such as 166.4625) as well as other agencies. Therefore also see listings for Customs Service and other coodinated agencies elsewhere in this directory for possible additional frequencies. Primary frequencies in the UHF band appear to be known by channel numbers, although some frequencies are reported to be identified by women's code names.

DEA Academy, Arlington VA: 170.90 171.45 172.20

DEA Aircraft include Cessna 206-G's: N6422Y, N9413Z, N9932Z, N9987Z.

VHF usage includes: 163.5375 164.825 165.2375 165.2875 165.4125 165.5125 165.5675 166.4625 169.20 170.825 170.875 170.90 171.25 171.45 171.65 172.00 172.05 172.20 172.70 172.575. A monitor reports 45.46 used for short-range communications in the Florida panhandle area.

UHF channels:

FISH & WILDLIFE SERVICE

This agency's enforcement operations are on 408.675/410.625 MHz. Overseeing more than 90-million acres requires many surveillance systems to aid their enforcement personnel. Systems in use or planned include vehicle tracking devices, miniature transmitters, satellites, telephone taps, and telephone pen-registers that keep a record of all numbers called from specific telephones. When DX skip conditions are good, the agency's 34 MHz band operations at wildlife refuges may be monitored from points hundreds or even thousands of miles away. For the convenience of those who pursue DX'ing with their scanners, a listing of the geographic usages of the most popular 34 MHz frequencies is provided.

Aircraft roster: N70Y (Cessna 206); N701 (Partenva P68); N705 & N721 (Cessna 206); N60984 & N61053 (Cessna 185)-- also see Dept. of Interior roster.

GENERAL SERVICES ADMINISTRATION

The GSA hasn't yet attracted the interest of most scanner owners, probably because little information regarding its communications system has been made available. Yet, the 18,600 employees of the GSA's Public Buildings Service is responsible for the design, construction or leasing, appraisal, operation, maintenance and protection of most of the federally controlled buildings in the nation. This covers 284-million square feet of space, including the parking areas, of about 8,500 federally owned and leased buildings, in addition to hundreds of millions of dollars worth of construction projects now underway. Building protection, which is a major mission of the GSA's Public Buildings Service, utilizes intrusion alarm systems, entry control devices, physical barriers, and a uniformed and armed security force. Uniformed personnel operate at fixed posts, on roving patrols, or are assigned to mobile response units and special tactical squads. In addition to preventing or deterring traditional property crimes, such as theft and vandalism, PBS must provide protection directed against persons, and incidents disruptive to the normal conduct of Government business. These include real or threatened bombings, unruly demonstrations, depredation of property, and terrorist attacks against Government officials.

Frequencies: The GSA's Public Buildings Service operates primarily through repeaters on 415.20 and 417.20 MHz, with inputs on 413.875, 415.20, and 419.175 MHz. Locations not shown in the callsign listing that follows will most likely be found on 415.20 or 417.20. A few special facilities operate on other frequencies, as indicated in the listings. It is reported that the Government Officials Protection Service utilizes 166.2125, 168.225, 168.40 and 407.925 MHz.

FEDERAL BUREAU OF INVESTIGATION

When it comes to an agency that holds a definite mystique for scanner owners (and probably everyone else, too), the FBI wins in a breeze. This agency generates more information, interest, and questions than any other-- and no wonder, because the FBI is certainly the world's most well known and high-profile law enforcement organization; and doubtless the most efficient. Scarcely a day goes by without coming across something about the FBI appearing in the national news media-- whether it's a kidnaping, catching highjackers or terrorists, a bank robbery, or a seemingly endless array of tasks the agency is called upon to tackle in its activities. While such exploits may be all in a day's "routine" work for the 20,400 men and women who staff the FBI, to scanner owners they are beyond dazzling and constitute an irresistible attraction-- albiet not without its own unique considerations.

From the barrage of information received by the author from scanner owners, it's apparent that (unlike many other federal agencies) there is a deliberate lack of uniformity in the agency's communications structure from one local area to the other. A particular channel may have the code name "Blue 3," in one city and be known as "Black 1," or "Gold 2" in other areas. Moreover, although the use of repeaters is widespread, the output/input frequency pairs also varies considerably within the many frequencies at the agency's national disposal. In previous issues if this Registry, an effort was made to keep up with this, but it became a losing battle not only because of the many variable factors, but also because of a considerable amount of conflicting information received from scanner owners that would seem to support the idea that frequencies in each area can be changed or switched from time to time.

It does seem that most of the agency's communications frequencies lie within the frequency ranges of 163.00 to 164.00 MHz, 167.00 to 167.90 MHz, and 411.00 to 420.00 MHz. Often the 167 MHz band frequencies are the input frequencies for 163 MHz frequencies. Often the 400 MHz band frequencies are repeaters or fixed links. A very commonly used frequency available at most locations is 167.5625 MHz, known variously as "Blue 4," "Gold 4," "Digicom F4" and other names. Similarly, a car-to-car frequency of 167.60 MHz is widely used and often referred to as "Blue 3." Frequencies in the 121.6 to 121.925 MHz band may be used when the agency communicates with a skyjacked airliner on the ground at an airport.

Because the agency is well aware that its frequencies lie within the monitoring range of the millions of scanners now in the hands of the public, some of its communications are exchanged with the use of digital voice scrambling devices. These transmissions sound like a hiss or rushing noise when monitored on your scanner; unlike the more basic types of scanners available to the general public (which have been relatively easy to unscramble using inexpensive devices-- now outlawed), digital scramblers generate communications that do not appear to be unscrambled by scanner owners-- and intentionally so. Probably only 10% to 20% of the agency's communications are scrambled (known in agent's lingo as "Papa" mode, or using "the bubble machine." It does, however, seem that the present generation of digital voice scramblers are less than fully reliable and also may cause deteoriation of voice quality to the extent that agents can't always understand all of the traffic sent via the bubble machines.

FBI stations all have regulation callsigns, although there is no shortage of tactical ID's to be heard such as "Lucky 3," or "Roadrunner 5," "Bulldog 3," etc. No attempt has been made here to list these tactical ID's which are not only varied, but are also rather tentative.

The status of the agency's HF operations is uncertain. Although, still occasionally reported with RTTY and SSB transmission, the HF frequencies do not seem to be in regular use anymore.

We have compiled the information submitted by scanner owners and also the data that has appeared in publications such as the newsletter of the All Ohio Scanner Club. From these sources, we have attempted to list all of the frequencies believed to be used by the FBI, as well as the callsigns, and the agents' on-the-air lingo. By placing your scanner into the search/scan mode in the agency's most popular frequency bands, you may discover additional frequencies. Also see the Dept. of Justice listings herein.

Agents' Lingo, Slang, Buzzwords:

A.I.C = Agent in charge
Big Guy = Primary suspect
Big One = A major street
Big Ribbon = A major highway
Bird Dog = Surveillance aircraft
Boat = Car
Box = Van
Break Off = Terminate surveillance
Bubble Machine = Voice scrambler
Charlie = Clear (unscrambled) communications
C.I. = Case informant
C.P. = Command post
D, The = Aircraft departure time
Diaper Change = Replacing batteries in hand-held transceiver or surveillance transmitter
Double L = Landline (a telephone call)
Eyeball = Visual surveillance
Eyes = Binoculars or night-vision aids
Flicks = Surveillance films or videotapes
Golden Arches = A McDonald's
Half Signal = The wife of an agent
Home Front = An agent's office
Kennel = An agent's office
Leg, A = An agent on street surveillance
Locals, The = Local police officers

Louie = Vehicle turning left
Mickey D's = A McDonald's
Nest = Suspect's residence/office
Noisemaker = A "bumper beeper" surveillance radio
O, The = Suspect's office
Our Boy = Primary person under surveillance
Our Friend = Primary person under surveillance
Our Guy = Primary person under surveillance
Our Interest = Primary person under surveillance
Our Main Interest = Primary person under surveillance
Outside Agency = The news media
Package = Suspect in custody
Papa = Scrambled communications
Plank = A bridge
Port = A hotel or motel
Primary = Primary person under surveillance
R, The = Suspect's home
R.A. = The Resident Agent
Rabbit = A person under surveillance
Rabbit Tracks = Subject is on the move
Redballed = Stopped at traffic light
Redboarded = Agent stopped at traffic light but suspect still moving
Rezz, The = Suspect's residence
Signal #__ = An agent's ID number & radio callsign
Soap Bubbles = Voiced scrambler
Special, A = A tactical operation
S. W. = Search warrant
Tango Juliet #__ = Highway exit number ____
Target = Primary person under surveillance
That Thing = A "bumper beeper" transmitter
U.C. = Undercover
U-ie, A = A U-turn
Uniform = Driving straight ahead
Victor = Driving in the right lane
Walker = An agent on foot surveillance
Walking The Dog = Subject/Agent on foot
Wired = Wearing a hidden body transmitter

10-0	No, Negative
10-7	Out of service
10-8	In service
10-21	Telephone call
10-23	Stand by
10-77	Bank robbery
10-85	Meet with agent
600	Subject vehicle
601	Suspect residence

JUSTICE, DEPT. OF

No information presently available on which division(s) of the Dept. of Justice utilize the following facilities, however the communications stations are possibly used to coordinate with other investigative or enforcement agencies.

Aircraft: N9898Z N9913Z N9963Z (Cessna 206's)

KFP881 167.85	KOG821 164.10	KOK229 150.45

Other possible frequencies: 149.22 163.00 164.2375 169.675

NUCLEAR REGULATORY COMMISSION

In addition to frequencies indicated here, the NRC is believed to have the capability to operate on VHF/UHF frequencies of the Department. of Energy at that agency's nuclear facilities. During the Three Mile Island nuclear emergency, the NRC was monitored using frequencies assigned to the Interagency National Emergency Fire Cache (INEFC). In the event of any future nuclear hazard, INEFC frequencies would no doubt be used again by the NRC during the critical phases of the situation.

HF Frequencies: 2378.5, 2446.5, 2659.5, 3342.5, 3380.5 3389.5, 5212.5, 5962.5, 6050, 6107.5, 6152.5, 6177.5, 7349.5, 10494.5, 11722.5, 11802.5, 11958.5, 12217.5, 14477.5, 14837.5, 14886, 14900.5, 14909.5, 17650.5, 20028.5 kHz. Daytime calling/emergency frequency is 10494.5 kHz; nights it's 5212.5 kHz. Secondary or backup frequency is 17650 kHz. Frequency 20028.5 kHz is common to all NRC Regional Offices.

Note that SS channel pairs "Echo/Foxtrot" and "Yankee/ Zulu" appear to be used for telephone patches to/from Air Force 1 and 2 and ground stations, also other VIP aircraft such as SAM-202, SAM-12492, SAM-31683 and others. Many telephone patches to "Crown" (White House Communications Center). Ground stations for this system are apparently located throughout the nation, although if you are out of range of a ground station you might still be able to copy the aircraft on 415.70 (FM).

The following Secret Service code name list covers from the 1960's to the present, which means that many of the names are no longer used. Also note that some VIP's are listed more than once, indicating that they were reassigned new code names periodically. Some code names have been identified in the national media, others are pure guesswork, still others remain unidentified, and we assume that some are incorrect.

A 1924 PAGE FROM FEDERAL STATION HISTORY!

Hard to believe, but years ago the U.S. Government regularly published comprehensive directories of its own communications stations. As they were discontinued in the 1930's, few today know of them. Below you see part of a page from the 1924 edition.

GOVERNMENT LAND RADIO STATIONS, ALPHABETICALLY BY NAMES OF STATIONS

[This table includes all Government land radio stations of the United States. Wave lengths in italic (in this table only) are used for "listening in and calling"]

Station	Class	Call signal	Frequency in kilocycles (meters in parentheses)	Service	Hours	Owner
Aberdeen Proving Grounds, Md.	FX	WUN	200 (1,500), 229 (1,310)	O	Y	U. S. Army.
Afognak, Alaska	FX	WWT	250 (1,200), 500 (600)	O	X	Department of Commerce, Bureau of Fisheries.
Akiak, Alaska	FX	WWF	500 (600), 705 (425)	O	X	Department of Interior, Bureau of Education.
Albany, N. Y.	FA, FX	WWAH	230 (1,305), 320 (940),[1] *5,370 (89)*, 3,380 (88.8), 5,930 (50.59), *5,940 (50.51)*.	O	N	Department of Commerce, Bureau of Lighthouses.
Ambrose Channel Lightship, N. Y.	FC	WRG	375 (800), 410 (730), 500 (600)	O[3]	(4)	Do.
Anacortes, Wash. (section base 12)	FC	NOK		O		U. S. Coast Guard.
Anacostia, D. C.	FA	NSF		O		U. S. Navy.
Anchorage, Alaska	FX	WXE	200 (1,500), 476 (630), 4,310 (69.61)	PR	Y	U. S. Army.
Annapolis, Md. (Naval Academy)	FC	NAK		O		U. S. Navy.
Annapolis, Md. (See Washington, D. C.)	FX	NSS				Do.
Annapolis, Md. (laboratory)	FX	NZO		O		Do.
Arlington, Va. (See Washington, D. C.)	FX	NAA		O		Do.
Astoria, Oreg., radio	FC	NPE	102 (2,939),[4] [5] 500 (600)	PG	N	Do.
Atka Island, Alaska	FX	WJI		O	X	Department of Interior, Bureau of Education.
Atlanta, Ga.	FA, FX	WHZ	235 (1,275), 266 (1,130),[1] *5,370 (89)*, 3,400 (88.2), 5,920 (50.68), *5,940 (50.51)*.	O	N	Department of Commerce, Bureau of Lighthouses.
Atlanta, Ga. (sixth district, U. S. N. R.)	FX	NDJ		O	X	U. S. Navy.
Augusta, Me. (first district, U. S. N. R.).	FX	NDR				Do.
Balboa, Canal Zone, radio (Darien)	FC, FX	NBA	46 (6,518),[6] [7] 102 (2,939), 143 (2,100), 500 (600)	PG	N	Do.
Balboa, Canal Zone (fifteenth district, U. S. N. R.).	FC	NDG		O		Do.
Balboa, Canal Zone (control)	FC, FX	NFD		O		Do.
Baltimore, Md. (fifth district, U. S. N. R.).	FX	NDE		O	X	Do.
Barataria, La (Grande Isle)	FC	NOC		O		U. S. Coast Guard.
Bar Harbor Me., radio	FC	NBD	122 (2,460), 143 (2,100), 500 (600)	PG	N	U. S. Navy.
Barnegat Lightship, N. J.	FC	WRA	410 (730), 500 (600)	O[3]		Department of Commerce, Bureau of Lighthouses.
Bellefonte, Pa.	FA, FX	WWQ	214 (1,400), 302 (995),[1] *5,370 (89)*, 3,380 (88.8), 5,930 (50.59), *5,940 (50.51)*.	O	N	Do.
Bellevue, D. C.	FX	NKF		O		U. S. Navy.
Bethel, Alaska	FX	WXI	659 (455)	PR	Y	U. S. Army.
Biloxi, Miss. (section base 15)	FC	NOI		O		U. S. Coast Guard.
Block Island, R. I.	FC	NMD		O		Do.
Blunts Reef Lightship, Calif.	FC	KCM	375 (800), 410 (730), 500 (600)	O[3]	(4)	Department of Commerce, Bureau of Lighthouses.

About The Author

Since 1956, Tom Kneitel's byline has appeared on hundreds of features and columns in publications such as Popular Electronics, Electronics Illustrated, CQ Magazine, TV Guide, Science & Mechanics, Space Age, Elementary Electronics, & Hobby Radio/S9, to name a few. He also wrote a major portion of the section about communications in the Encyclopedia Americana. In Tom's credits are a long string of training films written for the U.S. Army Signal Corps, as well as many communications and projects books and frequency registries. Since 1982, Tom has been the Editor of Popular Communications Magazine.

Tom is registered as Monitoring Station KNY2AB, and is active in Ham radio as K2AES and ZF2JO (ex-W5KDR, KS4CH, K3FLL, WA6SYV). Kneitel is a member of the ARRL, QCWA, SOWP, SSB Network, Armed Forces Communications & Electronics Assn., Association of Old Crows, The Army Signal Corps Assn., The Navy League, the U.S. Naval Institute, and the Aircraft Owners & Pilots Assn. Kneitel is listed in Who's Who In America, Who's Who In The World, and Who's Who In U.S. Writers, Editors & Poets.

In addition to his communications interests, Tom is an avid power boating and sports car enthusiast.

Since 1967, CRB Research has been the pioneer and leading publisher of communications data and related material. A complete catalog is available upon request.
